

SDG13: CLIMATE ACTION

The World Islamic Sciences and Education University devotes significant attention to combating environmental pollution and contributing positively to climate change.

The World Islamic Sciences and Education University contributes towards the achievement of a sustainable environment and campus through teaching specialised subjects, physics and Earth sciences, and their teaching methods therein.

Furthermore, tobacco combustion when smoking cigarettes produces smoke known as passive smoking, which contains toxic chemicals that contribute to the pollution of the external and internal environments. As such, our university in all buildings seeks to create a healthy environment for its employees by holding educational courses and campaigns that address the harms and losses of smoking.
