SDG6: CLEAN WATER AND SANITATION

The World Islamic Sciences and Education University has placed a high priority on tracking water consumption in the university, with many modern monitoring systems focused on recording consumption rates, and the university has rationalised consumption amounts for individuals and services to meet international standards.

In response to the COVID-19 outbreak, **The World Islamic Sciences and Education University** seeks to prevent the spread of the disease, such as providing WASH services and infection prevention control in health facilities.

The World Islamic Sciences and Education University has adopted governmental policies to rationalise water consumption and has strengthened these policies strongly and solidly, as shown by the fact that all internal facilities are equipped with consumption rationalisation systems, and a detailed irrigation and water consumption program for all purposes in the university has been developed. The Department of Public Services provides water suitable for various uses in the university buildings. **The World Islamic Sciences and Education University** closely monitors water distribution within its walls, as it is concerned with delivering water to all buildings and providing drinking water directly to all buildings and amenities under a plan aimed at entirely encompassing the campus.

The World Islamic Sciences and Education University has participated with the Ministry of Water and Irrigation, in cooperation with the German Agency for International Cooperation GIZ, within the religious awareness project in rationalizing water consumption since

2018. The university ranked fifth among Jordanian universities.
